

the color you need now ...

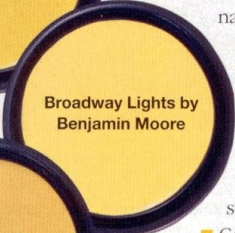

# goldenrod

“Golden yellow provides a beautiful backdrop for many colors—blues, greens, reds, purples ... even gray. Gold tones create an instantly vibrant background.” —designer Alex Papachristidis

Gambol Gold by Sherwin-Williams

Broadway Lights by Benjamin Moore

India Yellow by Farrow & Ball

The color yellow warms up a space—it's uplifting when used in light-filled rooms and with complementary hues. Richer yellow with a touch more gold, inspired by agricultural regions such as Tuscany and Provence, adds depth and a sense of European elegance to interiors.

- Yellow gives the appearance of light even in rooms without much natural light. Try it in a powder room, hallway, or entry hall.
- Use it to enhance gilding and gold furnishings; it can make a room glow.
- Create an old-world contrast with crimson. For inspiration, look at medieval tapestries that incorporate the always sophisticated gold-and-crimson combination.
- Curtains made in this color unite with the outdoors, bringing sunshine in and radiating a sense of warmth.
- Contrast yellow with strong woods, such as ebony or mahogany, and the room takes on a feeling of romance. Incorporate more rustic woods, such as walnut or oak, and the room develops provincial charm, albeit with a healthy dose of style.
